

TRI CAPABILITY-BUILDING PROGRAMME · KICK-OFF SESSION

TRI Something New

An Eduthon in Vibe Coding, Data Analytics and Power BI — from hands-on workshops to a real business-as-usual challenge.

Kick-Off · Friday, 25 September 2026

September 2026 – January 2027

BACKGROUND

Access to AI tools isn't the same as confidence using them

The gap

Conventional workshops build awareness, but staff rarely get the chance to integrate and apply what they've learned to real work.

The response

The Eduthon combines structured instruction, guided practice and applied competition — so capability is built, then actually used.

OBJECTIVES

What we want out of this programme

01

Equip TRI staff with practical AI and digital skills that help them work smarter and more confidently.

02

Make learning more engaging through hands-on practice, teamwork and healthy competition.

03

Encourage participants to develop useful solutions that improve everyday work and create real impact within TRI.

PROGRAMME TIMELINE

Four phases, September 2026 to January 2027

25 SEPT 2026 Kick-Off Programme briefing, expectations and judging PIC: Ryan (Emcee)	OCTOBER 2026 Workshops Vibe Coding, Data Analytics, Power BI PIC: Workshop Leads	NOV 2026 – JAN 2027 Competition Unit BAU problem, solution development, mentor check-ins PIC: Units / Mentors	JANUARY 2027 Finale & Awards Team presentations, judging, award ceremony PIC: Programme Committee / Judges
--	--	---	--

Exact dates and PICs confirmed during detailed planning

One learning journey, three capabilities

Each workshop builds a core capability that units apply directly to their competition solution. A public case study gives everyone a shared, realistic dataset to practise on first.

Vibe Coding

Learn to prompt effectively and use AI to support coding, exploration and troubleshooting.

Lead: Mirza / Daniel

Data Analytics

Prepare data, structure the analysis and identify meaningful patterns.

Lead: Arief

Power BI

Turn analysis into clear visualisations and interactive storytelling.

Lead: Seng

THE COMPETITION · CHALLENGE CONTEXT

Rather than a shared external case, each TRI unit identifies a genuine business-as-usual challenge within their own function and builds a working solution — a Python-based automation, a Power BI dashboard, a Power App, or another appropriate form.

"How can our unit use Vibe Coding, Data Analytics and/or Power BI to solve a real BAU problem more effectively?"

Central Challenge Statement

WHY THIS WORKS

Designed around problems you already know

Design feature	Rationale
Beginner-friendly	Teams start from a BAU problem they already understand deeply, lowering the barrier to entry.
Challenging	Real BAU data is messy and organisation-specific — teams must genuinely diagnose, not template.
Practical	Every solution addresses a real unit need, with a genuine chance of continued use after the Eduthon.
Transferable	Mirrors everyday TRI work: automating tasks, analysing performance, spotting trends, informing decisions.

What's expected, and what support looks like

Team formation

Teams are formed within units; each team distributes responsibilities across the capstone project.

Participation expectations

Attend the Kick-Off and Workshops, contribute to the project, and present at the finale.

Mentoring

Mentors guide teams on scope, analysis, technical blockers and presentation readiness — without doing the work for them.

Check-ins

Short milestone reviews track case understanding, data prep, findings, dashboard progress and presentation readiness.

JUDGING

One rubric, four criteria, any solution type

Criteria are solution-agnostic, so a Python automation, a Power BI dashboard or a Power App is assessed fairly on the same basis. Each is scored independently on a 1–5 scale.

1

**Business Impact &
Relevance**

2

**Technical Execution & Tool
Application**

3

**Application of
Capabilities Learned**

4

**Communication &
Presentation**

Scale: 1 Limited · 3 Competent · 5 Excellent

RECOGNITION & AWARDS

Four categories, one Champion

Best Business Impact

Solves a genuine BAU problem,
delivers practical value

Best Technical Execution

Well-built, reliable, well-matched
to the problem

Most Creative Application

Creative, resourceful use of what
was learned

Best Storytelling

Most compelling communication
of problem and impact

Each recognition winner receives an e-certificate and a customised MS Teams banner.

EDUTHON CHAMPION

Highest overall score across the complete judging rubric — awarded a plaque.

TODAY & WHAT'S NEXT

Where we go from here

Today's session

3:00–3:05	Welcome & introduction
3:05–3:25	Programme briefing: objectives, timeline, expectations, awards, judging
3:25–3:30	Q&A and closing

Before October

- Form your unit team
- Watch for workshop scheduling (Vibe Coding, Data Analytics, Power BI)
- Start thinking about a genuine BAU problem in your function

Detailed timeline in the full programme proposal

Let's TRI Something New.

Questions welcome now, or anytime before the workshops begin in October.
