1. Executive Summary

TRI Something New is proposed as a structured **Capability-Building Eduthon** that develops practical skills in Vibe Coding, Data Analytics and Power BI. The programme combines hands-on workshops with a competitive capstone project, allowing participants to demonstrate how effectively they can apply the capabilities learned.

The revised concept retains the learning and innovation intent of the original proposal while introducing a clearer *competitive* element. Teams will work on a common case, transform raw data into meaningful findings, develop an interactive dashboard and present actionable recommendations to a panel of judges.

Programme Proposition

Skills are developed through workshops. Only then are they applied through a capstone project where participants will be rewarded based on their performance.

The Eduthon will run from September 2026 to January 2027. It begins with a kick-off, continues through a sequenced workshop programme, moves into capstone development and concludes with final presentations and awards.

2. Background and Objectives

Background

TRI staff have access to AI tools. However, access does not automatically translate into confidence or practical capability. Conventional workshops may create awareness, but participants may have limited opportunities to integrate and apply what they have learned. The Eduthon addresses this gap by combining structured instruction, guided practice and applied competition. Participants will progressively build capabilities and then use them together to solve a realistic business problem

Objectives

- Develop practical capabilities in Vibe Coding, Data Analytics and Power BI.
- Build confidence in using AI-assisted tools to support coding, data exploration and problem solving.
- Develop clear data storytelling and presentation skills.
- Reinforce learning through a competitive capstone project.

3. Programme Timeline

High-Level Timeline

The programme is structured across four phases. Exact dates and selected PICs will be confirmed during detailed planning.

Timeline	Activity	Key Deliverables	PIC
Mid-Sep 2026	Kick-Off	• Programme Briefing • Expectations and Judging • Pre-Assessment • Vibe Coding Workshop	Ryan (Emcee)
Sep – Dec 2026	Workshops	• Vibe Coding • Data Analytics • Power BI	Workshop Leads
Dec – Jan 2026	Capstone Project	• Data Preparation, Analysis, Validation, Dashboarding, etc. • Mentor Progress Check-Ins	Teams/Mentors
January 2027	Final Presentation and Awards	• Team Presentation • Dashboard Demonstrations • Judges Evaluation • Award Ceremony • Post-Assessment • Closing	Programme Committee/Judges

Detailed Timeline

Day 1: Kick-Off

Time	Activity	Remarks	PIC
3:30 – 3:40PM	Welcome and Introduction	• Welcoming Remarks • Housekeeping	Ryan
3:40 – 3:55PM	Briefing on TRI Something New Hackathon	• Objectives • Timeline • Expectations • Awards • Judging	Arief

3:55 – 4:00PM	Pre-Assessment Form	Assess participants base knowledge	Ryan
4:00 – 4:10PM	Break		
4:10 – 5:20PM	Workshop	Vibe Coding Workshop	Mirza
5:20 – 5:30PM	Closing	- Q&A - Key Reminders - Closing	Ryan

Day 2:

Time	Activity	Remarks	PIC
3:30 – 3:40PM	Welcome and Introduction	- Welcoming Remarks - Housekeeping	Ryan
3:40 – 4:50PM	Team Presentations	10 Minutes / Group	Ryan
4:50 – 5:00PM	Break	- Compile Judges Evaluation - Assign Awards Winners	Daniel
5:00 – 5:15PM	Award Presentation	Ucop presents the award?	Ryan
5:15 – 5:30PM	Closing	- Group Photo - Closing	Ryan

5. Workshops

The workshop series is designed as one connected learning journey. Each workshop builds a core capability that teams will apply directly to the capstone project. The workshops (Other than Vibe Coding) will be held similar to how KSS is conducted.

Workshop	Purpose	Capstone Output	Lead	Timing
Vibe Coding	Learn to prompt effectively and use AI to support coding, exploration and troubleshooting.	Supports data understanding, preparation, coding and exploration.	Mirza/Daniel	Sep
Data Analytics	Prepare the data, structure the analysis and identify meaningful patterns.	Provides a documented analysis plan and well-supported findings.	TBC	Oct

Power BI	Turn analysis into clear visualisations and interactive storytelling.	Enables an effective, user-friendly dashboard and visual narrative.	Seng	Oct/Nov
----------	---	---	------	---------

6. Capstone Project

Case Context

The capstone will use the Cyclistic rider analysis case. Cyclistic is a fictional bike-sharing company seeking to understand how casual riders and annual members behave differently so that it can develop strategies to convert more casual riders into members.

Central Business Question

How do casual riders and annual members use Cyclistic differently, and what actions could Cyclistic take to convert more casual riders into annual members?

Why This Works

Design Feature	Rationale
Beginner-Friendly	The business question is clear, intuitive and requires no prior industry knowledge. Teams can begin with simple comparisons before developing deeper findings.
Challenging	The case includes large volumes of imperfect data across multiple files. Teams must clean, consolidate and interpret the data rather than merely report observations.
Comparable	All teams work from the same base case, enabling fair comparison while allowing different analytical approaches, visual designs and recommendations.
Transferable	The work mirrors TRI activities such as consolidating data, comparing performance, identifying trends and exceptions, building dashboards and translating findings into decisions.

7. Participation and Support

Participants will compete in teams and are expected to attend the core programme sessions, contribute actively to the capstone and participate in the final presentation.

Area	High-Level Arrangement
Team Formation	Team will be formed within units. Each team should distribute responsibilities during the Capstone Project.
Participation Expectations	Participants are expected to attend the Kick-Off, Workshops, contribute to the project and present.
Mentoring	Mentors are there to guide teams on scope, analysis, technical blockers and presentation readiness without completing the work on behalf of participants,
Check-Ins	Short milestone reviews will monitor case understanding, data preparation, preliminary findings, dashboard progress and presentation readiness.

8. Judging and Awards

Judging

Teams will be evaluated using a single consolidated judging rubric covering the quality of the analysis, findings, communication, dashboard and application of the capabilities developed during the Eduthon. Judges will assess each criterion independently using a five-point scale:

Score	Performance Benchmark
1	Limited: The criterion is largely unmet, unclear, inaccurate, or unsupported.
2	Developing: The criterion is partially met, but material weaknesses remain.
3	Competent: The criterion is adequately met and supported by sufficient evidence.
4	Strong: The criterion is met to a high standard, with clear evidence and only minor limitations.
5	Excellent: The criterion is met exceptionally well and demonstrates outstanding application.

The detailed assessment criteria and performance benchmarks are provided in [Appendix: Detailed Judging Rubric](#). Judges will record their scores using the standard form in [Appendix: Judges' Scoring Sheet](#). The judging rubric presented to judges will not identify or refer to the recognition categories. Judges will focus solely on evaluating the quality of each team's work against the stated criteria. They will not be required to nominate teams for any recognition.

Following the judging process, the organising committee will consolidate the scores and apply an internal mapping between the assessment criteria and the following recognition categories:

Recognition	Focus
Best Analysis	Well-supported findings
Best Storytelling	Most compelling communication of insights
Best Dashboard	Most effective and user-friendly dashboard
Most Innovative	Most creative use of the tools learned

The team with the highest consolidated score within each area will receive the corresponding recognition. The internal mapping and calculation method are provided in [Appendix: Committee Score Consolidation and Recognition Mapping](#).

The Eduthon Champion is the programme's principal award and will be awarded to the team with the highest overall score across the complete judging rubric. A team does not need to receive the highest score in every recognition area to become the Eduthon Champion. The award recognises the team with the strongest combined performance across the analytical, communication, dashboard and innovative application capabilities developed during the programme.

Award

TBA

9. Budget

Item	Quantity	Unit Price	Total Cost
Lanyard	50	RM 3.95	RM 197.50
PVC Card	50	RM 2.50	RM 125.00
Refreshments & Venue (Tea Break @ Lanai)	50	RM 15.00	RM 750.00
Gift Award	1	RM 350.00	RM 350.00
Contingency			RM 200.00
Total Cost			RM 1619.50

10. Appendix

Detailed Judging Rubric

Instructions to Judges

Evaluate each team using the criteria below. Scores should be based on the team's:

- Analysis and supporting evidence
- Power BI dashboard
- Final presentation
- Dashboard demonstration
- Supporting documentation, where applicable
- Responses during the question-and-answer session

Each criterion must be assessed independently. A strong performance in one criterion should not automatically result in a strong score in another criterion. Judges should award a whole-number score from 1 to 5 for each criterion. The descriptions for scores 1, 3, and 5 establish the principal benchmarks:

- A score of 2 should be awarded where, performance falls between Limited and Competent.
- A score of 4 should be awarded where, performance falls between Competent and Excellent.

Consolidated Rubric

<i>Criterion</i>	<i>What's Assessed</i>	<i>1: Limited</i>	<i>3: Competent</i>	<i>5: Excellent</i>
<i>Analytical Rigour</i>	The quality of data preparation, analytical structure, methodology, and validation.	Significant data-quality or methodological weaknesses remain. The analytical process is unclear or has limited connection to the business question.	The main data-quality issues are addressed, and the analysis follows a reasonable approach that addresses the business question.	The data is thoroughly prepared and validated. The analytical approach is rigorous, reproducible, and directly aligned with the business question.
<i>Quality and Relevance of Findings</i>	The accuracy, depth, relevance, and practical value of the findings and	Findings are unclear, inaccurate, descriptive only, or unsupported.	Findings are generally accurate and supported by appropriate evidence.	Findings are highly credible, insightful, and supported by strong evidence.

	recommendations .	Recommendations have limited relevance to the findings.	Recommendations are relevant and reasonably practical.	Recommendations are specific, practical, and convincingly derived from the analysis.
Communication of Insights	The structure, clarity, persuasiveness, and delivery of the team's analytical story.	The presentation is difficult to follow. Important insights and recommendations are unclear or poorly communicated.	The presentation follows a logical structure, communicates the main insights clearly, and is completed within the allocated time.	The presentation delivers a compelling and decision-oriented narrative. Complex insights are communicated simply and persuasively, with professional delivery and precise responses to questions.
Dashboard Functionality and Usability	The dashboard's technical reliability, organisation, navigation, and interactivity.	The dashboard is incomplete, unreliable, or difficult to navigate. Important functions or interactive features do not operate effectively.	The dashboard performs its main functions and has a reasonably clear layout that can be used with limited guidance.	The dashboard is technically polished, reliable, responsive, and intuitive for a first-time user to navigate and explore independently.
Visual and Decision Effectiveness	The suitability of visualisations and the dashboard's ability to communicate decision-relevant information.	Visualisations are confusing, inappropriate, or provide limited support for interpreting the findings.	Visualisations are generally appropriate and communicate the principal findings and comparisons.	Visualisations are exceptionally clear and purposeful. The dashboard enables users to identify priorities, patterns, comparisons, and exceptions efficiently.
Creative Application of Capabilities	The originality and effective integration of Vibe Coding, AI-assisted tools, data analytics, and Power BI.	The capabilities are applied separately or minimally, with limited evidence of originality, validation, or additional value.	The capabilities are appropriately combined to produce the required outputs, with some relevant adaptation or creativity.	The capabilities are seamlessly and responsibly integrated into a distinctive solution that delivers substantial additional value.

Judges' Scoring Sheet

Team and Judge Details

Field	Details
Team Name	
Judge Name	
Date	

Score Entry

Refer to the detailed performance descriptions in Appendix: Detailed Judging Rubrics before awarding scores.

No.	Criterion	Maximum Score	Score Awarded
1	Analytical Rigour	5	
2	Quality and Relevance of Findings	5	
3	Communication of Insights	5	
4	Dashboard Functionality and Usability	5	
5	Visual and Decision Effectiveness	5	
6	Creative Application of Capabilities	5	
Total Score			

Committee Score Consolidation and Recognition Mapping

This appendix is intended for the organising committee and should not be included in the judging materials. The six judging criteria will be mapped internally to the four recognition categories as follows:

<i>Recognition</i>	<i>Criteria Used</i>	<i>Maximum Score</i>
<i>Best Analysis</i>	1. Analytical Rigour 2. Quality and Relevance of Findings	10
<i>Best Storytelling</i>	3. Communication of Insights	5
<i>Best Dashboard</i>	4. Dashboard Functionality and Usability 5. Visual and Decision Effectiveness	10
<i>Most Innovative</i>	6. Creative Application of Capabilities	5
<i>Overall Eduthon Score</i>		30

The different maximum scores do not affect the determination of each recognition because teams are compared only against other teams within the same recognition area. The Eduthon Champion is determined using the complete score across all six criteria.

Score Consolidation

Since there is more than one judge, the organising committee will calculate the average score for each criterion. The final averages should be recorded to two decimal places.

<i>No.</i>	<i>Criterion</i>	<i>Judge 1</i>	<i>Judge 2</i>	<i>Judge 3</i>	<i>Average</i>
1	Analytical Rigour				
2	Quality and Relevance of Findings				
3	Communication of Insights				
4	Dashboard Functionality and Usability				
5	Visual and Decision Effectiveness				
6	Creative Application of Capabilities				
<i>Total Score</i>		/30	/30	/30	/30

Results Summary

<i>Result</i>	Calculation	Team Score
<i>Best Analysis</i>	Criteria 1 + 2	/10
<i>Best Storytelling</i>	Criterion 3	/5
<i>Best Dashboard</i>	Criteria 4 + 5	/10
<i>Most Innovative</i>	Criterion 6	/5
<i>Overall Eduthon Score</i>	Criteria 1 to 6	/30
Overall Percentage		/100%

Judges will not be asked to select or nominate recognition recipients. The recognition recipients will be determined as follows:

- **Best Analysis:** Team with the highest combined average score for Criteria 1 and 2.
- **Best Storytelling:** Team with the highest average score for Criterion 3.
- **Best Dashboard:** Team with the highest combined average score for Criteria 4 and 5.
- **Most Innovative:** Team with the highest average score for Criterion 6.
- **Eduthon Champion:** Team with the highest overall average score across all six criteria.
